Education

Bachelor of Science in Computer Science

Portland State University

June 2025

Portland, Oregon

GPA: 3.54, Computer Science GPA: 3.74, Dean's List

Associate of Applied Science in Computer Programming

Lane Community College

June 2022

Eugene, Oregon

GPA: 3.78, Phi Theta Kappa Honor Society

Professional Experience

React Developer

Northwest Media, Inc.

August 2025 – October 2025

Eugene, Oregon

- Developed **30+** interactive **React** exercises for *Foster Parent College*, improving foster parent training on behavioral and developmental topics.
- Implemented **5 new features** in the shared **React** component library (nwm-common-react), enabling the creation of richer and more flexible course content.
- Coordinated development across **3 Git repositories** and integrated bilingual dialogue scripts (English/Spanish) to ensure consistency and content parity with legacy versions.

Software Engineer Intern

Oregon Criminal Defense Lawyers Association

March 2022 – June 2022

Eugene, Oregon (Remote)

- Added an interactive map view to the member search directory using **JavaScript**, **PHP**, and **Google Maps API**, enhancing usability for **1,000+ legal professionals**.
- Built a reusable filtering component that dynamically generates checkboxes from query parameters to improve search usability.
- **Refactored 500+ lines** of legacy **PHP** and **JavaScript** code to improve maintainability, readability, and reduce technical debt across two web apps.

Projects

Bloom – Node.js, Express, EJS, MongoDB, JavaScript, Socket.IO, CSS

Bloom is a **full-stack social platform** designed to help users form new friendships based on shared interests and values. It features a matching algorithm, JWT and GitHub authentication, email verification, and instant messaging.

BikePed Portal (PSU Capstone) – Python, Django, Celery, PostgreSQL, JavaScript

BikePed Portal is a data management system designed to help urban planners analyze pedestrian and bicycle traffic across **50+ U.S. cities**. Features automated processing with **Celery** and a **Django** and **PostgreSQL** backend.
